PROFESSIONAL EXPERIENCE

Eudaimonic Inc. (DeepSpace)

Software Engineer

New York, NY

May 2026 - Present

Software Engineer Intern

January 2026 - April 2026

- Designed and shipped Create Mode, an AI development tool that turns plain-English chat into production-ready web applications, owning the feature end-to-end from initial architecture through launch at a pre-launch AI-native startup
- Architected per-session Cloudflare Containers that give each user project an isolated Node.js workspace, enabling safe, concurrent AI code generation and execution across sessions
- Shipped 5+ full-stack web applications end-to-end (TypeScript, React, Next.js), owning system design, development, and production deployment
- Integrated 20+ third-party services across 100+ API endpoints, ensuring reliable data flow and fault-tolerant behavior across production applications

Paidwork

Sacramento, CA

AI/Machine Learning Intern

September 2025 - December 2025

- Built the testing framework for the AI service's data pipeline and API layer, reaching 85%+ code coverage and catching integration failures before production rollout
- Extended the AI assistant to 100+ languages by integrating translation APIs with language-detection and fallback routing, replacing English-only handling of non-English queries
- Built an internal integration testing-page that let the team validate endpoints and inspect responses in-browser, replacing the team's manual Postman workflow

DuPont de Nemours

Hsinchu, Taiwan

Technical Engineer Intern

June 2023 - August 2023

- Automated recurring reporting for a 20-person team by building Python scripts that pulled raw data and generated formatted Excel deliverables, eliminating a manual data-entry step from the reporting cycle
- Prototyped a computer-vision safety monitor using OpenCV and a pre-trained detection model, flagging workers missing required PPE from live lab camera feeds as a proof of concept for automating manual inspection rounds
- Presented on internal automation and AI tooling at a company-wide virtual session for 500+ DuPont employees; placed 1st in the Internship Program Competition

PROJECTS

BookWithMe - Scheduling App

January 2026 - May 2026

TypeScript, Vite, Cloudflare Workers, OpenAI API, Google Calendar API

- Built and deployed an AI-assisted, Calendly-style scheduling application that centralizes availability management and reduces manual booking, independently owning the work from UI design through production release
- Implemented secure Google Calendar sync with token refresh and scoped access so hosts and guests only see their own booking data; backed by Cloudflare Worker endpoints handling booking, rescheduling, cancellation, and automated emails

Ergonomic Risk Detection Research

April 2026 - June 2026

Python, Reinforcement Learning, MATLAB

- Developed a reinforcement learning model for ergonomic risk detection, training and evaluating multiple algorithms across 200,000+ sensor conditions
- Reviewed 15+ existing research papers to design an optimized approach and tuned reward structures to drive optimal agent behavior, collaborating with a cross-functional team to synthesize the findings into a comprehensive research paper

EDUCATION

Santa Clara University

September 2021 - June 2025

Bachelor of Science in Computer Science; Specialization: Data Science/Machine Learning

Santa Clara, CA

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, TypeScript, JavaScript, SQL

Frameworks & Tools: React, Next.js, Node.js, TensorFlow, OpenCV, Cloudflare Workers, Docker, Git, REST APIs

Certifications: Advanced AI Essentials (Google), Developing Applications in Python (AWS), A Framework For Deploying AI in Your Enterprise (IBM), Introduction to Large Language Models (Google), Generative AI (Google)
