EDUCATION

Santa Clara University

Bachelor of Science in Computer Science; Specialization: Data Science/Machine Learning
Minor: Mathematic, Computer Engineer

Sep 2021-June 2025

Santa Clara, CA

TECHNICAL SKILLS AND LANGUAGE

- **Programming Languages:** Java, Python, C++, JavaScript, TypeScript, HTML, CSS, React, SQL, NoSQL, C#, Swift
- **Technology:** AI, Neural Networks, NLP, MatLab, LLM, Tensorflow, Deep Learning, Pytorch, Git, Kubernetes, Docker
- **Relevant Courses:** Artificial Intelligence, Data Science, Applied ML, Object-Oriented Programming, Algorithm, Data Structure, Algebra, Probability and Statistic, Discrete Math, Computer Architecture
- **Languages:** Native fluency in English and Chinese(Mandarin)

PROFESSIONAL EXPERIENCES

DeepSpace, Eudaimonic Inc

Software Engineer Internship

January 2026 - Present

New York, NY

- Shipped 5+ full-stack web applications end-to-end(TypeScript, React, Next.js) at a pre-launch AI-native startup, owning system design, development, and deployment within a monorepo architecture
- Built and deployed a full-stack AI-assisted booking platform adopted for internal operations, designed backend services and frontend interfaces while open-sourcing the system for reuse in future client integrations
- Developed and maintained application features by integrating 20+ third-party services and working across 100+ API endpoints, ensuring reliable data flow and system functionality across production applications

Paidwork

AI/Machine Learning Internship

September 2025 - December 2025

Sacramento, Ca (Remote)

- Decreased model training duration by 20% and accelerated deployment cycles through optimized machine learning pipeline by integrating cloud based distributed computing and automated hyperparameter tuning.
- Achieved over 85% test coverage through engineering comprehensive mock testing frameworks that enhanced pre-deployment validation to ensure model robustness and reliability prior to production rollout.
- Improved response accuracy by 35% by integrating multilingual support and logic through translation APIs within the AI framework,expanding conversational capabilities to over 100 languages

Santa Clara University

Technical Service Student Assistant

May 2024 - June 2025

Santa Clara, CA

- Designed and utilized SQL queries to maintain and update 50,000+ bibliographic records, ensuring efficient organization and accessibility of information resources for users
- Improved data accuracy by 25% by building and maintaining dynamic Excel dashboards using Power Query to automate updates of library records and resource data, enabling real-time visibility and actionable insights for all students and staff
- Assisted library staff in the ongoing process of updating and integrating government documents into the library's collections, ensuring compliance with archival standards and reducing cataloging errors by 20%

PROJECTS

Scheduling App - BookMe | TypeScript, Vite, Cloudflare Workers, OpenAI API, Google Calendar API

January 2026 - May 2026

- Built an AI-assisted internal Calendly-style application to reduce manual booking and centralize availability management
- Independently owned end-to-end development and deployment, from UI design to production release
- Implement secure calendar integration with OAuth authentication and protected host/guest booking data
- Engineered 8 + scalable server actions to support bookings, rescheduling, cancellations, and no-show tracking
- Integrate Google API to support calendar synchronization, event creation, and automated email confirmations

Ergonomic Risk Detection Research(Reinforcement Learning) | Python, MATLAB

April 2025 - June 2025

- Achieved over 90% accuracy that utilizes Python machine learning algorithm to determine risk detection
- Studied over 15 existing research papers to improve accuracy and developed new optimized solution using existing methods
- Managed and analyzed the training process for multiple algorithms over 200,000 sensor conditions
- Explored diverse reward structures fine-tuning reward dynamics to drive optimal agent behavior and coordination
- Collaborated with a cross functional team to integrate findings into a comprehensive research paper

LEADERSHIP EXPERIENCE

Alpha Phi Omega | Vice President & Historian

Feb 2024-June 2024

- Coordinated the execution of membership recruitment and pledge programs, ensuring smooth onboarding and engagement
- Overseeing the creation and execution of the pledge education program, ensuring effective integration of fraternity values
- Managed a comprehensive member database, maintaining accurate records for over 100+ active and alumni members
